New nucleic acid encoding nuclear mitotic appts. interacting and proteins - useful for modulating cell division and proliferation and in 1 proteins - useful for modulating cell division and proliferation and claim 28; Page 57-58; 78pp; English.

The sequences given in 777784-86 encode NuMA binding proteins (NuMA - nuclear mitotic apparatus). These protein sequences were identified using the fusion proteins given in W21731-32. Compounds which interfered using the fusion proteins given in W21731-32. Compounds which interfered using the fusion and/or proliferation. Ab, raised conventionally using NIP-10 r -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for diagnostic or therapeutic use, e.g. to detect defective NuMA or NIP which may be marker for aberrant (including malignant) cell growth (which can also markers for aberrant (including malignant) cell growth (which can also markers for aberrant (including malignant) cell growth (which can also markers for aberrant (including malignant) cell growth (which can also markers for aberrant (including malignant) cell growth (which can also can also expected by nucleic acid sequencing). Also where malignancy is related to defects in NuMA or NIP, it can be treated by administration can also can be a detected by the protein encoded by this can be a contacted by the contact of sequencing or the protein encoded by this 01.007-1997 (first entry)

CDNA clone 59 encoding NIP-1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for systematic analysis of structure and function of mCREBa - useful for systematic analysis of structure and function of mCREBa and identification of those molecules with which it will react identification of those molecules with which it will react claim 3; Pages 26-29; 41pp; English.

This is the nucleotide sequence of the gene encoding the mouse cAMP regulatory element binding (mCREBa) protein. The products of the mCREBa such as antibodies can be used for the recombinant production of the protein, to identify novel genes encoding binding partner polypeptides for mCREBa and identification of those molecules with which it will react, to identify inhibitors of mCREBa binding to other natural binding partners and to generate rodents with the natural binding partners and to generate rodents what hat fail to express a functional mCREBa or express a variant mCREBa, useful as models for studying the activities of mCREBa and mCREBa modulators in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gene encoding the mouse CAMP regulatory element binding protein. Mouse CAMP regulatory element binding; mCREBa; antibody; inhibition; MUREBa modulator; ss. Mus sp.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              744 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 31; Page 100-101; 160pp; English.

The Drosophila CREB1 gene (T14025) codes for an enhancer-specific activator (R91295) that appears to be a member of the CREB/ATF family and that is associated with long-term memory. The gene was isolated by a DNA-binding expression screen of a Drosophila head cDNA library using a probe contg. 3 cAMP-responsive element sites. dCREB1 and dCREB2 (see also T14024) genes can be used to manipulate memory, and transgenic insects carrying the genes can be used to assess the effects of drugs on long-term memory formation.

Claim 26; Page 40-42; 84pp; English.

This nucleotide sequence comprises novel human tumour rejection
antigen precursor (TRAP) MAGE-C1 cDNA (see also V69720). MAGE-C1
is a novel member of the MAGE family that may be recognised by
cytotoxic T cells, leading to lysis of the tumour cells which
cxpress it. MACE-C1 and MACE-C2 (see W81546-47) are expressed in a
variety of tumours and in normal testis cells, but not by other
normal cells. The MAGE-C1 CNA was isolated from a melanoma
cornal cells. The MAGE-C1 (see W81546-47) are expressed in a
variety of tumours and in normal testis cells, but not by other
normal cells. The MAGE-C1 (see W81546-47) are expressed in a
variety of tamours and in normal testis cells, but not by other
normal cells. The MAGE-C1 ONA was isolated from a melanoma
cornal cells. The MAGE-C1 open comprised to prove energie of protein. The
NACE-C1 gene was localised to chromosome region Xq26-q27. MACE-C1
and MACE-C1 gene was localised to chromosome region Xq26-q27. MACE-C1
cand MACE-C1 gene was localised to chromosome region Xq26-q27. MACE-C1
comprising an oligonuclectide having a sequence of from the 4031 bp MACE-C1 cDNA and an oligonuclectide
cuclectides 18-34 of the 4031 bp MACE-C1 cDNA and an oligonuclectide
cumour rejection antigens derived from MAGE-C1 or MAGE-C2 and a least one tumour rejection antigen derived
from MAGE-C1 or MAGE-C2 and at least one other tumour rejection
cantigen. MACE-C1 and MACE-C2 can be used in a method for determining
contigen. MACE-C1 and MACE-C2 can be used in a method for determining
contigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tumour rejection antigen precursors - used for determining presence of cytolytic T cells specific for complexes of a human leukocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1892 CTTCAGGGGGGAGGAATTCCAGTCTTCT.......CTCCAGAGCCC 1929

This nucleotide sequence encodes novel human tumour rejection
antigen precursor (TRAP) MAGE-C1 (see W81546). MAGE-C1 is a novel
member of the MAGE family that may be recognised by cytotoxic r
cells; leading to lysis of the tumour cells which express it.

MAGE-C1 and MAGE-C2 (see W81547) are expressed in a variety of
tumours and in normal testis cells, but not by other normal cells.

The MAGE-C1 cDNA was isolated from a melanoma L8373-MEL CDNA by
CPCR amplification (see V69732-33). It shows homology to MAGE-A1
CDNA (see V69719). The MACE-C1 gene was localised to Xq26-q27.

MAGE-C1 and MAGE-C2 cDNAS (see V69736) are claimed, as are:

CAPPERSSION VECTORS; transformed or transfected cell lines (e.g. COS)
and CHO); an isolated TRAP encoded by the CDNAS, a kit useful in a
CPCR based assay; a method for determining expression of a MAGE-C1
gene using the kit; a polytope comprising a number of tumour
crejection antigens derived from MAGE-C1 or MAGE-C2; and a polytope
comprising at least one tumour rejection antigen.

MAGE-C1 and MAGE-C2 can be used in a method for determining the
presence of cytolytic T cells specific for complexes of a human
leukocyte antigen (HLA).

Detection of t(1,19) break-point-associated genes E2A and pr1-in chromosomal translocation, and prods. useful in diagnosis and therapy of human neoplasm, esp. acute lymphoblastic leukaemia Disclosure; Fig 4A. 104pp; English.

The cDNA contains a single ORF encoding 654 amino acids and 2.4 kb of 3' untranslated mRNA. The 3' untranslated region is not fully represented due to discontinuous reproduction in the specification. With the exception of a single in frame insertion of 3 bases, nucleotides 678-2015 are identical in sequence to the nucleotides 9-134 of the E12 isolate of the E12 gene (013670). The inserted Eriplet results in the addition of glutamine 390.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunoglobulin; enhancer-binding factor; chromosomal translocation;

Claim 1; ; 218pp; English.

T17439-T17453 and T17455-T17529 represent mutations of the human breast and ovarian cancer predisposing gene (BRCA1) (for wild type see T17438).

Proteins encoded by these mutations (see R81483-R81497 and R81499-R81546) can be used as immunogens for antibody production. These mutant BRCA1 genes have at least 1 mutation or polymorphism in comparison to the wild cype sequence. By detecting a germline alteration in the willd type BRCA1 genes, a predisposition for breast and ovarian cancer can be diagnosed.

In one method, BRCA1 mRNA isolated from a tissue sample from a subject of none method, corresponding to a fragment of the wild type sequence (or an allele-specific probe for one of these mutations), added to it. The conditions allow for hybridisation of the probe to the mRNA, and any hybridisation which occurs is detected. Alternatively the BRCA1 gene in the tissue sample is isolated, and a shift in electrophoretic mobility of single stranded DNA from the sample on a non-denaturing polyacrylamide gel indicates a mutation. These methods of detection can also diagnose a lesion neoplasia associated with the BRCA1 locus. The methods may be used to screen for drancer therapy and protein mimetics, and may be used to screen for drancer therapy and protein mimetics, and may be used to screen for drancer therapy and protein mimetics, and may be used to screen for drancer therapy and protein mimetics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2637 AGTCGGGAAACAAGCATAGAAATGGAAGAAAGTGAACTTGATGCTCAGTA 2686

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 71 erAspLeuGlySerPheLeuAspAlaLeuGlyAspAsnHisGluArgLeu                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2847
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2886

New nucleic acid and polypeptide for mutant or polymorphic BRCAI gene - for diagnosis and therapy of human breast and ovarian cencer and for diagnosing pre-disposition to these cancers

Claim 1; 218pp; English.

Claim 1; 218pp; English.

Claim 1; 318pp; English.

Can dovarian cancer predisposing gene (BRCAI) (for wild type see T17438).

Proteins encoded by these mutations (ERCAI) (for wild type see T17438).

Can be used as immunogens for antibody production. These mutant BRCAI genes have at least 1 mutation or polymorphism in comparison to the wild type sequence. By detecting a germline alteration in the wild type BRCAI can be used as probe, corresponding to a fragment of the wild type sequence (or an ethod, BRCAI mRNA isolated from a tissue sample from a subject or an orderion allow for hybridisation of the probe to the mRNA, and any conditions allow for hybridisation of the probe to the mRNA, and any hybridisation which occurs is detected. Alternatively the BRCAI gene in the tissue sample is isolated and a shift in electrophoretic mobility of single stranded DNA from the sample on a non-denaturing polyacrylamide gel indicates a mutation. These methods of detection can also diagnose a consection meoplasaia associated with the BRCAI locus. The methods may be used to screen for drugs in cancer therapy.

Sequence 5914 BP; 2007 A; 1156 C; 1315 G; 1436 T; Mutated BRCAl coding sequence from PM24.

A (SUGE-) SUGEN INC.

1 Joho KE, Plowman GD;

WPI: 98-131419/27.

P-PSDB: W48845.

New isolated receptor tyrosine kinase genes - which are expressed in neuronal tissues and tumour cells, useful as targets for neurodegenerative disorders or cancers.

This nucleic acid molecule (NAM) codes for LMR2_r (see W48845), a novel human receptor tyrosine kinase (RTK). A partial cONA clone was isolated from human heart CDNA using primers (see V42006 and V42010) based on rat LMR1_r cDNA (see V32448). 2 LMR2_h cDNA clone con colones of 4349 and 5482 bp were isolated from an NCI-H460 human man control of the colones of the colon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lung carcinoma cell line cDNA library and from a SNB75 library.

Iung carcinoma cell line cDNA library and from a SNB75 library.

Crespectively, using this partial clone. These clones span the complete 8982 bp human LMR2 cDNA. NAM8 (see W32448-56) coding for novel kinases LMR1, LMR2 and LMR3 (see W48841-49) have been obtained from rat, human and mouse sources. Expression of LMR1 and LMR3 is highly restricted to neuronal tissues with minimal expression in other adult or embryonic organs or in human tumour cell lines.

CLMR2 expression is limited to adult neuronal tissues, but is also very abundantly expressed in other non-neuronal foetal tissues and in numerous tumour cell lines. Based on restricted expression of call 3 LMRs to adult neuronal tissues and the up-regulation of LMR2 in a wide variety of tumour cell lines, these proteins may be critical targets for neurodegenerative disorders or cancer. Claimed probes and antibodies may be used for detecting neurodegenerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 12-071-1998 (first entry)

Column 11-18; 63pp; English.
770064-75 are BRCA1 mutant alleles from germline DNA and breast cancer patient tumours from chromosome 17q-linked families. In the present sequence the mutation has led to the deletion of exon 3 (54 bp) and the generation of a stop codon corresponding to amino acid position 27 of the wild type protein, leading to a predicted protein tumcation (see W10000). The nucleic acids can be used as probes in hybridisation assays for screening patients for susceptibility to breast, ovarian or prostatic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BRCAl allele(s) - useful as genetic markers for breast, ovarian and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Example 2: Columns 11-18; 62pp; English.

Example 2: Columns 11-18; 62pp; English.

The present sequence represents a tumourogenic allele of the breast and ovarian cancer susceptibility gene (BRCA1). Exon 3 has been deleted to varian cancer susceptibility gene (BRCA1). Exon 3 has been deleted.

In the present allele, which results in a truncated protein. Several other mutagenic alleles have also been identified (See V6056-71). The polypeptides are useful for the identification of specific mutations of the C-terminal end of BRCA1. The alleles are specific mutations of the C-terminal end of BRCA1, and can be used to compare with the translation product from a patient to identify the mutation that is causing the disease. In this respect, they can also be used to raise allele specific antibodies.

They can also be used for detection purposes. The antibodies can be used in binding assays e.g. ELISA. The polypeptides can also be used for the treatment of breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                            09-DEC-1998 (first entry)
Tumourogenic BRCA1 allele #5803.
Tumourogenic allele; ovarian; breast cancer susceptibility gene; BRCA1; identification; specific mutation; allele specific antibody; detection; binding assay; treatment; ds.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C. Comment: This protein is a sequence-specific DNA-binding protein that mediates tran C. Superfamily: cAMP response element-binding protein; transcription regulation
C. Reywords: leucine zipper motif
F:329-389/Region: leucine zipper motif
F:329-369/Domain: fos/jun DNA-binding domain homology <FJD>
F:329-369/Domain: fos/jun DNA-binding domain homology <FJD>
F:329-369/Domain: posphate (Ser) (covalent) (by protein kinase A) #status predicted F:102/Binding site: phosphate (Ser) (covalent) (by protein kinase C) #status predicte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Discolate bill transcription regulator - fission yeast (Schizosaccharomyces pombe)
C;Species: Schizosaccharomyces pombe
C;Saccession: T3874

A,Rote: sequence extracted from NCBI backbone (NCBIP:119052)
B,Nasr, F.; Becam, A.M.; Herbert, C.J.
Submitted to the EMBL Data Library, October 1995
A,Bescription: The sequence of 36.8 kb from the left arm of chromosome XIV reveals 24 in the dystrophy kinase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     transcription factor SKO1 - yeast (Saccharomyces cerevisiae)

Rata Acuta CREB and expressed preferentially in brain.";

R. Mol. Cell. Biol. 10.1347-1357(1490).

-! FUNCTION: THIS PROTEIN BINDS THE CAMP RESPONSE ELEMENT (CRE)

C. CONSENSUS: 5'GTGACGT(A/C)(A/G)-3'), A SEQUENCE PRESENT IN MANY VIRAL AND CELLULAR PROMOTERS.

C. SUBUNIT: BINDS DNA AS A DIMER.

C. -! SUBCHIT: BINDS DNA AS A DIMER.

C. -! SUBCHIT: BLOOTHION: NUCLEAR.

C. -! ALTERNATIVE PRODUCTS: MXBP AND CRE-BP1 MAY BE MEMBERS OF A FAMILY OF MXBP/CRE-BP PROTEINS GENERATED BY ALTERNATIVE SPLICING.

C. -! PTW. PHOSPHORYLATION OF THR-69 AND THR-71 BY MAPKI4 CAUSES INCREASED TRANSCRIPTIONAL ACTIVITY. ALSO PHOSPHORYLATED AND ACTIVITY. ALSO PHOSPHORYLATED AND CRE-BLIP FAMILY.

C. -! SIMILARITY: BELONGS TO THE BZIP FAMILY. ATS OPHORPHORYLATED AND CRE-BLIP MATER ACTIVITY.

ACTIVATED BY JIK.
